

StarlingX User Documentation

- Requirements
 - StarlingX shall provide end-user and operator focused documentation that will enable users and operators to deploy StarlingX Edge clouds and operate & maintain them
- Primary responsibility for documentation infrastructure is in the Docs team
- Responsibility for doc content is shared with the Docs team and the broader community
 - In general the Docs team should own general content, and the owning dev teams should own content specific to their software
- We are using standard OpenStack documentation tools / formatting and have built out API docs, installation docs and contributor guides

Release Notes

- Reminder regarding the use of existing OpenStack Release Notes guidelines.
 - Release Notes Guidelines started
 - <http://lists.starlingx.io/pipermail/starlingx-discuss/2018-August/000690.html>
 - And it ended in our official guideline
 - https://docs.starlingx.io/contributor/release_note_contribute_guide.html
- In summary, every time a change is made a “release note” could be generated so at the end of our development cycle we can create the official report made of individual contributions from our Developers looking like this:
 - <https://docs.openstack.org/releasenotes/nova/rocky.html>

User Documentation Plan / Resourcing

- Doc strategy and planning
 - *First step* -- Our focus for the October release was complete API documentation and minimal installation, developer, and contribution guides. See <https://docs.starlingx.io/>.
 - *Minimum for May*-- For the May release, we need to keep up with code changes and additions while also implementing a new versioning capability. Docs should be tied to specific releases, and older versions should be available in an archive.
 - *Investment to thrive* -- For the project to thrive and to drive adoption, we need complete user docs. We're not staffed for this.
- User documentation options
 - Can / will Wind River release a subset of documentation to the community? The Docs team will convert it to the OSF framework
 - Shall we build a plan to re-create that documentation? Who will do the work?
